

Immunization Registry

Benefits for You & Your Adult Patients

Immunization registries aren't just for pediatric patients anymore.

Registries for Adults

Your state's immunization registry is a centralized, secure database that can store an individual's immunization history. When adult patients come in for their flu vaccine, use the registry (also known as Immunization Information Systems [IIS]) to find out which other vaccines they need.

Immunization records from multiple healthcare providers and pharmacists at your fingertips.

Working for You

Use your state's immunization registry to:

- ☐ Save staff time
- ☐ Improve healthcare delivery to your adult patients
- ☐ Immediately access a patient's consolidated history of immunizations received from multiple healthcare providers
- ☐ Prevent costly vaccine waste by avoiding unnecessary doses
- ☐ Achieve reporting requirements or quality improvement measures

Web-based solutions

that improve your immunization services.

Discover how immunization registries benefit both your adult patients and your medical practice. To learn more, visit:

Start using your state's immunization registry today.

More and more adult vaccinations are being entered into immunization registries across the country. Recent data shows that 56 million adults over the age of 19 have a record in IIS.

Sign up now so your patient records are complete and accessible to their other healthcare providers, whether they are pharmacists, specialty care providers or medical home doctors. Ensure your practice is ready to administer vaccinations in case of a public health emergency.

Immunization registries aren't just for pediatric patients anymore. Help protect adult patients from vaccine preventable diseases.
